## **K•LINE LAUNCHES SURFACE, A NEW RANGE OF COPLANAR ENTRANCE DOORS.**

The SURFACE range offers you a new sensory experience. Their single-panel coplanar leaves sit perfectly flush with the front of the frame for the sleekest design. It combines the contemporary sobriety of a flat surface with the emotional intensity of a harmonious play of lights and shadows, aluminium and ceramic, a wide variety of textures...

Welcome to a world of purity and elegance.

## A PLAY OF MATERIALS

The subtle combination of materials is the other great novelty of the SURFACE range.

Nothing has been left to chance in order to convey elegance: aluminium, ceramic and glass combine in harmony down to the last millimetre.

K•LINE launches QUATUOR, a decorative system with 4 sublime finishes thanks to the play of materials.

You can pick any of these perfectly integrated ceramic linings for every entrance door:

- BETON (cement) effect for a contemporary look
- OXYDE with subtle reddish-brown shades
- BOIS (wood), for a warm and timeless look
- or the amazing ONDE finish, carved into the aluminium plate, playing with light and perspective.

## QUATUOR

## SLEEK LINES

The SURFACE range offers you a new sensory experience. Combine the contemporary sobriety of a flat surface with an intense emotional play of harmonious lights and shadows, aluminium and ceramic and a wide variety of textures.

An essential element of the new SURFACE range is a coplanar leaf which sits perfectly flush with the front of the frame for the sleekest design.

Nothing breaks the flowing lines: flat surfaces, perfectly integrated geometrical shapes from top to bottom and across, subtly-integrated accessories... The SURFACE range raises the standards of sleekness and elegance.

## QUALITY IN DETAILS

No less important than the design of the model is the choice of the opening and closing mechanism.

The choice of a handle should leave nothing to chance.

We have paid particular attention to this choice. That is why K•LINE has created 3 new handles with fine ceramic inlays for these new doors.

In addition to that, some of our sleekest models include an optional bar handle and an extremely restrained lock cover.

## DESIGN & TECHNOLOGY

When design is restrained in the extreme, details stand out. That is why, for this new range, K•LINE has paid particular attention to the finishes, “hiding” all the technical elements to achieve the greatest aesthetic sleekness.

Thus, the black finish joint smoothens the rabbet of the leaf. The smooth finish gives the leaf an extremely elegant look.

The lower part of the blade features a brushed aluminium base to protect it from splashes from outside. Thanks to its perfect fit, it is a 100% decorative element.

The utmost attention to detail can also be seen in the sill, with its anodized aluminium finish, with concealed drainage and a black rubber band preventing dirt from getting in.

Finally, another good example of integration of its elements: the weather strip.

Instead of being part of the leaf, as usual, here it is totally concealed, which enhances the sleekness of our new range.
